4 20ma Current Loop Primer Industrial Automation Training

This well-organized book is intended for the undergraduate students of Electrical, Electronics and Communications, Computer, Instrumentation and Instrumentation and Control Engineering; and postgraduate students of science in Electronics, Physics and Instrumentation. Data acquisition being the core of all PC-based measurements and control instrumentation systems engineering, this book presents detailed discussions on PC bus based data acquisition, remote data acquisition, GPIB data acquisition and networked data acquisition configurations. This book also describes sensors, signal-conditioning and principles of PC-based data acquisition. It provides several latest and advanced techniques. This book stresses the need for understanding the use of Personal Computers in measurement and control instrumentation applications. KEY FEATURES : • Provides several laboratory experiments to help the readers to gain hands-on experience in PC-based measurement and control. • Provides a number of review questions/problems (with solutions to the odd numbered problems) and objective type questions with solutions. • Presents a number of working circuits, design and programming examples. • Presents comparison of properties, features and characteristics of different bus systems, interface standards, and network protocols. • Includes the advanced techniques such as sigma–delta converter, RS-485, I2C bus, SPI bus, FireWire, IEEE-488.2, SCPI and Fieldbus standards.

Since its publication 10 years ago, engineers, executives, sales representatives, managers, and financial personnel new to process control have relied on the 1st Edition of this book for a basic understanding of process control and instrumentation principles and applications. This 2nd Edition still covers those topics, but it also introduces new topics and discusses recent developments in the field of process control. Each chapter has been thoroughly updated and a new chapter on fuzzy logic has been added. However, the book's basic goal has not been changed: the elements of process control are described simply and with examples so that even a non-technical person can understand the essential principles. Contents: Who Should Read This Book? What is Meant By a Process? How Instruments Work Together How Measurements Are Made How Controllers Control How Fuzzy Logic Controllers Control How Final Control Elements Function How Logic Control is Performed The Company Hierarchy of Control External Influences on Instrumentation Incidental Hardware Design and Selection of Instruments and Systems Engineering Considerations Managerial Considerations.

Este texto constituye una visión de los sistemas de instrumentación electrónica desde una óptica fundamentalmente práctica. Su contenido está enfocado hacia estudios de nivel universitario en cuyo desarrollo científico o tecnológico se incluyan aspectos relacionados con los sistemas instrumentales y de medida dentro del contexto electrónico. El desarrollo se realiza a lo largo de diez grandes temas que evolucionan desde los aspectos más generales de la instrumentación hasta las soluciones de carácter aplicado y práctico. El contenido de todos los temas incluye ejemplos numéricos de aplicación que usan datos reales a lo largo de de 79 ejercicios resueltos, resúmenes que permiten fijar las ideas generales de cada capítulo y baterías de problemas propuestos que el lector puede usar como autoevaluación. En estos se proporcionan pistas para facilitar su realización: apartados relacionados, figuras que hay que manejar y ejemplos resueltos que tocan aspectos similares. Los datos necesarios y los gráficos reales con las soluciones pueden consultarse en la pestaña "Recursos previo registro" de esta ficha. También se incluyen ejemplos concretos no numéricos en el propio texto y una serie de informaciones relacionadas con el mundo de la Instrumentación Electrónica tales como curiosidades, personajes relevantes y anécdotas diversas que deben contribuir a excitar la curiosidad del lector para que trascienda el contenido de este texto.
