The Great Plains has been central to academic and popular visions of Native American warfare, largely because the region's well-documented violence was so central to the expansion of Euroamerican settlement. However, social violence has deep roots on the Plains beyond this post-Contact perception, and these roots have not been systematically examined through archaeology before. War was part, and perhaps an important part, of the process of ethnogenesis that helped to define tribal societies in the region, and it affected many other aspects of human lives there. In *Archaeological Perspectives on Warfare on the Great Plains*, anthropologists who study sites across

the Plains critically examine regional themes of warfare from pre-Contact and post-Contact periods and assess how war shaped human societies of the region. Contributors to this volume offer a bird's-eye view of warfare on the Great Plains, consider artistic evidence of the role of war in the lives of indigenous hunter-gatherers on the Plains prior to and during the period of Euroamerican expansion, provide archaeological discussions of fortification design and its implications, and offer archaeological and other information on the larger implications of war in human history. Bringing together research from across the region, this volume provides unprecedented evidence of the effects of war on tribal societies. *Archaeological Perspectives on Warfare on the Great Plains* is a valuable primer for regional warfare studies and the archaeology of the Great Plains as a whole. Contributors: Peter Bleed, Richard R. Drass, David H. Dye, John Greer, Mavis Greer, Eric Hollinger, Ashley Kendell, James D. Keyser, Albert M. LeBeau III, Mark D. Mitchell, Stephen M. Perkins, Bryon Schroeder, Douglas Scott, Linea Sundstrom, Susan C. Vehik

A sociology professor looks at the sociological aspect of boxing based on the three years he spent with a gym on Chicago's south side.

The human body defines a lucrative site of reusable parts, ranging from whole organs to minuscule and even microscopic tissues. Although the medical practices that enable the transfer of parts from one body to another most certainly relieve suffering and extend lives, they have also irrevocably altered perceptions of the cultural values assigned to the body. In *Bodies, Commodities, and Biotechnologies*, Lesley A. Sharp probes the ideological assumptions underlying the transfer of body parts, the social significance of donors' deaths, and the medico-scientific desires surrounding complex forms of body repair. She also considers the experimental realm, in which nonhuman species and artificial devices present further opportunities for recovery and controversy. A compelling scientific investigation and social critique, *Bodies, Commodities, and Biotechnologies* explores the pervasive, and at times pernicious, practices shaping American biomedicine in the twenty-first century.

How far should society go in permitting people to buy and sell goods and services? Should they be able to treat such things as babies, body parts, and sex as commodities that can be traded in a free market? Should politics be thought of as just economics by another name? Margaret Jane Radin addresses these controversial issues in a detailed exploration of contested commodification. Economists, lawyers, policy analysts, and social theorists have been sharply divided between those who believe that commodifying some goods naturally tends to devalue them and those who believe that almost everything is legitimate grist for the market mill. In recent years, the free market position has been gaining strength. In this book, Radin provides a nuanced response to its sweeping generalization. Not only are there willing buyers for body parts or babies, Radin observes, but some desperately poor people would be willing sellers, while better-off people find such trades abhorrent. Radin argues that many such areas of contested commodification reflect a persistent dilemma in liberal society: we value freedom of choice and simultaneously believe that choices ought to be restricted to protect the integrity of what it means to be a person. She views this tension as primarily the result of underlying social and economic inequalities, which need not reflect an irreconcilable conflict in the premises of liberal democracy.
