Ever since the discovery of blood types early in the last century, transfusion medicine has evolved at a breakneck pace. This second edition of Blood Banking and Transfusion Medicine is exactly what you need to keep up. It combines scientific foundations with today's most practical approaches to the specialty. From blood collection and storage to testing and transfusing blood components, and finally cellular engineering, you'll find coverage here that's second to none. New advances in molecular genetics and the scientific mechanisms underlying the field are also covered, with an emphasis on the clinical implications for treatment. Whether you're new to the field or an old pro, this book belongs in your reference library. Integrates scientific foundations with clinical relevance to more clearly explain the science and its application to clinical practice. Highlights advances in the use of blood products and new methods of disease treatment while providing the most up-to-date information on these fast-moving topics Discusses current clinical controversies, providing an arena for the discussion of sensitive topics. Covers the constantly changing approaches to stem cell transplantation and brings you the latest information on this controversial topic.

This 1998 book was the first to be dedicated to peripheral neuropathies of immune or infectious origin, covering pathogenesis, diagnosis and treatment.

The Reader's Guide to Lesbian and Gay Studies surveys the field in some 470 entries on individuals (Adrienne Rich); arts and cultural studies (Dance); ethics, religion, and philosophical issues (Monastic Traditions); historical figures, periods, and ideas (Germany between the World Wars); language, literature, and communication (British Drama); law and politics (Child Custody); medicine and biological sciences (Health and Illness); and psychology, social sciences, and education (Kinsey Report).

Organ transplantation is one of the most dramatic interventions in modern medicine. Since the 1950s thousands of people have lived with 'new' hearts, kidneys, lungs, corneas, and other organs and tissues transplanted into their bodies. From the beginning, though, there was simply a problem: surgeons often encountered shortages of people willing and able to give their organs and tissues. To overcome this problem, they often brokered financial arrangements. Yet an ethic of gift exchange coexisted with the 'commodification of the body'. The same duality characterized the field of blood transfusion, which was essential to the development of modern surgery. This book will be the first to bring together the histories of blood transfusion and organ transplantation. It will show how these two fields redrew the lines between self and non-self, the living and the

dead, and humans and animals. Drawing on newspapers, magazines, legal cases, films and the papers and correspondence of physicians and surgeons, Lederer will challenge the assumptions of some bioethicists and policymakers that popular fears about organ transplantation necessarily reflect timeless human concerns and preoccupations with the body. She will show how notions of the body- intact, in parts, living and dead- are shaped by the particular culture in which they are embedded.

This book discusses the appropriate policy response to the AIDS epidemic. Among the topics addressed are the classification of AIDS in state public health systems and statutes, reporting policies for people with AIDS or HIV infection, atest for deterring whether screening proposals are justified, and practices for screening special populations.

the potential for extending molecular studies in brain tissue obtained at autopsy into studies in living brain by using neuroimaging techniques. In addition, the reader is directed to suppliers of equipment and reagents that have been shown to be useful when studying human brain tissue. Topics include problems of collecting brain tissue at autopsy, how psychiatric diagnosis can be made after death and specific problems faced in using human brain tissue in modern laboratory-based techniques. Suitable for all those using human tissue in their research, this manual is of particular value to those commencing studies using human brain tissue.

Previous editions are cited in Books for College Libraries, 3rd ed.. This guide contains descriptions of about 17,500 associations and societies from the fields of science, culture and technology. Arrangement is alphabetically by name within an alphabetical listing of countries. Indexing is by association names, persons, and subjects. Each entry gives the association name (where applicable: extension to name, abbreviation, name in English, former name), contact information, homepage, year of foundation, number of members, names of officials, details of periodical publications, and whether or not a library and/or archives exists. New information includes details on aims and activities, awards, grants, and events. Distributed by Gale. Annotation copyrighted by Book News Inc., Portland, OR.
