New to English law? Need to know how rules are made, interpreted and applied? This popular and well-established textbook will show you how. It simplifies legal method by combining examples with an account of rules in general: the who, what, why and how of interpretation. Starting with standpoint and context, it identifies factors that give rise to doubts about the interpretation of a rule and recommends a systematic approach to analysing those factors. Questions and exercises integrated in the text and on the accompanying website will help you to develop skills in reading, interpreting and arguing about legal and other rules. The text is fully updated on developments in the legislative process and the judicial interpretation of statutes and precedent. It includes a new chapter on 'The European Dimension' reflecting the changes brought about by the Human Rights Act 1998.

Compiled by scholars at the court of Liu An, king of Huainan, in the second century B.C.E, The Huainanzi is a tightly organized, sophisticated articulation of Western Han philosophy and statecraft. Outlining "all that a modern monarch needs to know," the text emphasizes rigorous self-cultivation and mental discipline, brilliantly synthesizing for readers past and present the full spectrum of early Chinese thought. The Huainanzi locates the key to successful rule in a balance of broad knowledge, diligent application, and the penetrating wisdom of a sage. It is a unique and creative synthesis of Daoist classics, such as the Laozi and the Zhuangzi; works associated with the Confucian tradition, such as the Changes, the Odes, and the Documents; and a wide range of other foundational philosophical and literary texts from the Mozi to the Hanfeizi. The product of twelve years of scholarship, this remarkable translation preserves The Huainanzi's special rhetorical features, such as parallel prose and verse, and showcases a compositional technique that conveys the work's powerful philosophical appeal. This path-breaking volume will have a transformative impact on the field of early Chinese intellectual history and will be of great interest to scholars and students alike.

The essays in this volume illuminate a central topic in ethical theory: moral dilemmas. Some contemporary philosophers dispute the traditional view that a true moral

dilemma - a situation in which a person has two irreconcilable moral duties - cannot exist. The book provides the historical background to the on-going debate with selections from Kant, Mill, Bradley, and Ross. The best recent work is represented in essays by Donagan, Foot, Hare, Marcus, Nagel, van Fraassen, Williams, and others.

Frank A. Lewis presents a closely argued exposition of *Metaphysics Zeta*--one of Aristotle's most dense and controversial texts. Lewis argues that in giving his actual conclusion to *Zeta* in its final chapter, 17, Aristotle drops his earlier, largely critical engagement with received views, and turns approvingly to his own *Posterior Analytics*, and adopts a causal view of (primary) substance, representing (primary) substances--the basic entities in his ontology--as the cause of being for different compound material substances. Meanwhile, the failure of previous attempts at definition in earlier chapters leaves Aristotle's own definition standing as the 'best explanation' for the views proprietary to the theory of form and matter. The point that (Aristotelian) forms are the primary substances is not the main conclusion to *Zeta*, but rather a result his definition must give, if the definition is to be acceptable.

Relations between Christians and Jews over the past two millennia have been described as the longest hatred. This report challenges the Church of England to find hopeful and honest ways to help in transforming that hatred into respect and trust.

We live in a globalised world in which people and goods are transported across ecosystem boundaries in greater volumes and faster than ever before. One consequence of globalisation has been the introduction, establishment, and spread of many thousands of species beyond the ecosystems in which they evolved. Many of these species cause harm, and are referred to as invasive. This book brings together experts from many disciplines to present multi-disciplinary perspectives on the impacts of invasive species, and how

interdisciplinary approach, this new edition, divided into five sections, begins by examining healthcare as an integrated system. Chapter 1 provides a hierarchical model of healthcare, rising from departments, to centers, regions and the “macro system.” A new chapter demonstrates how to use simulation to assess the interaction of system components to achieve performance goals, and Chapter 3 provides hands-on methods for developing process models to identify and remove bottlenecks, and for developing facility plans. Section 2 addresses crowding and the consequences of delay. Two new chapters (4 and 5) focus on delays in emergency departments, and Chapter 6 then examines medical outcomes that result from waits for surgeries. Section 3 concentrates on management of demand. Chapter 7 presents breakthrough strategies that use real-time monitoring systems for continuous improvement. Chapter 8 looks at the patient appointment system, particularly through the approach of advanced access. Chapter 9 concentrates on managing waiting lists for surgeries, and Chapter 10 examines triage outside of emergency departments, with a focus on allied health programs. Section 4 offers analytical tools and models to support analysis of patient flows. Chapter 11 offers techniques for scheduling staff to match patterns in patient demand. Chapter 12 surveys the literature on simulation modeling, which is widely used for both healthcare design and process improvement. Chapter 13 is new and demonstrates the use of process mapping to represent a complex regional trauma system. Chapter 14 provides methods for forecasting demand for healthcare

on a region-wide basis. Chapter 15 presents queueing theory as a method for modeling waits in healthcare, and Chapter 16 focuses on rapid delivery of medication in the event of a catastrophic event. Section 5 focuses on achieving change. Chapter 17 provides a diagnostic for assessing the state of a hospital and using the state assessment to select improvement strategies. Chapter 18 demonstrates the importance of optimizing care as patients transition from one care setting to the next. Chapter 19 is new and shows how to implement programs that improve patient satisfaction while also improving flow. Chapter 20 illustrates how to evaluate the overall portfolio of patient diagnostic groups to guide system changes, and Chapter 21 provides project management tools to guide the execution of patient flow projects.
