opportunity for the sort of coaching that could significantly improve their individual skills and overall performance. In truth improvements in technique and fitness can only enhance one's enjoyment of the game so everyone should take the opportunity to learn a little more of what it is all about. Games are probably as old as man himself. Many writers gave ride to hint about the origins of Hockey, using the writings, paintings and sculptures of the ancients as evidence. Some very plansive theories have emerged but unfortunately researchers, dwelling into the past of other games, played the same evidence as substantiating the development of their particular past time. In this connection it is interesting to know that according to Dr. Dannie Craven RUGBY was once played with a stick.

The general theme of MEDICON 2013 is "Research and Development of Technology for Sustainable Healthcare". This decade is being characterized by the appearance and use of emergent technologies under development. This situation has produced a tremendous impact on Medicine and Biology from which it is expected an unparalleled evolution in these disciplines towards novel concept and practices. The consequence will be a significant improvement in health care and well-fare, i.e. the shift from a reactive medicine to a preventive medicine. This shift implies that the citizen will play an important role in the healthcare delivery process, what requires a comprehensive and personalized assistance. In this context, society will meet emerging media, incorporated to all objects, capable of providing a seamless, adaptive, anticipatory, unobtrusive and pervasive assistance. The challenge will be to remove current barriers related to the lack of knowledge required to produce new opportunities for all the society, while new paradigms are created for this inclusive society to be socially and economically sustainable, and respectful with the environment. In this way, these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications. Periodization authority Tudor Bompa and strength and conditioning expert Carlo Buzzichelli eliminate the guesswork and establish a clear path to reaching peak physical condition and gaining a competitive edge. Periodization Training for Sports includes programs and training models for 35 sports.

The ball handler who fakes and then drives past a defender for an easy score. A pass rusher who leaves a would-be blocker in his wake on the way to sacking the quarterback. A setter who manages to maneuver both body and ball in the blink of an eye to make the perfect pass for the kill and match-winning point. These are all reasons agility and quickness are such prized physical attributes in modern sport. Efforts to become markedly quicker or more agile, however, aren't always successful. Genetic limitations, technical deficiencies, and inferior training activities are among the major obstacles. *Developing Agility and Quickness* helps athletes blow past those barriers thanks to the top sport conditioning authority in the world, the National Strength and Conditioning Association. NSCA hand-picked its top experts to present the best training advice, drills, and programs for optimizing athletes' linear and lateral movements. Make *Developing Agility and Quickness* a key part of your conditioning program, and get a step ahead of the competition.
