What makes information useful? This seemingly simple and yet intriguing and complicated question is discussed in this book. It examines ways in which the quality of information can be improved in knowledge-intensive processes (such as on-line communication, strategy, product development, or consulting). Based on existing information quality literature, the book proposes a conceptual framework to manage information quality for knowledge-based content. It presents four proven principles to apply the framework to a variety of information products. Five in-depth company case studies show how information quality can be managed systematically. The book uses frequent diagrams and tables, as well as diagnostic questions and summary boxes to make its content actionable.

The IT revolution has affected the entire world by producing a new, Internet-based, digital economy. The challenges faced by developing countries in harnessing the full potential of IT are not really very different from those that confronted the U.S. in its journey toward the Internet economy. Information Technology Management in Developing Countries discusses the possible pitfalls and triumphs involved when implementing this entity into the structure of a developing country.

This book, suitable for IS/IT courses and self study, presents a comprehensive coverage of the technical as well as business/management aspects of mobile computing and wireless communications. Instead of one narrow topic, this classroom tested book covers the major building blocks (mobile applications, mobile computing platforms, wireless networks, architectures, security, and management) of mobile computing and wireless communications. Numerous real-life case studies and examples highlight the key points. The book starts with a discussion of m-business and m-government initiatives and examines mobile computing applications such as mobile messaging, m-commerce, M-CRM, M-portals, M-SCM, mobile agents, and sensor applications. The role of wireless Internet and Mobile IP is explained and the mobile computing platforms are analyzed with a discussion of wireless middleware, wireless gateways, mobile application servers, WAP, i-mode, J2ME, BREW, Mobile Internet Toolkit, and Mobile Web Services. The wireless networks are discussed at length with a review of wireless communication principles, wireless LANs with emphasis on 802.11 LANs, Bluetooth, wireless sensor networks, UWB (Ultra Wideband), cellular networks ranging from 1G to 5G, wireless local loops, FSO (Free Space Optics), satellites communications, and deep space networks. The book concludes with a review of the architectural, security, and management/support issues and their role in building, deploying and managing wireless systems in modern settings.

Survey and study background In an effort to gain some answers on the 1ST capital investment (project selection) decision criteria used in practice, a survey was undertaken in 1990 of 80 American, British, Australian and New Zealand companies. A one-page survey form was used that provided 15 possible 1ST investment criteria, a means of indicating whether they are used or not, the percentage of projects to which each criterion is applied, and an overall ranking in terms of total project value for each criterion. The criteria are shown in Table 2.1. The criteria are categorized into financial, management, and development criteria. They were developed, first, through interviews with some 20 chief information officers (CIOs) in Britain and the United States. These CIOs were questioned on what criteria their organizations use in selecting 1ST investment projects, with the aim of developing a full list of the criteria used in practice. Secondly, the criteria and the form were tested and refined in a pilot study with some 12 companies. The criteria used in the survey and listed in Table 2.1 are primary level criteria.

Essentials of Management Information Systems, 2/e, prepares students of the constantly changing demands of information systems management - first by relating MIS to management, the organization, and technology, focusing on the importance of integrating these elements; secondly by tracking emerging technologies and organizational trends; thirdly by consistently using examples taken from real businesses both domestic and foreign. The Second Edition explores the recent, rapid expansion of INTERNET related technologies and the impact they are having on how business is being done. The CD ROM-based Multimedia Edition offers all the text content, including figures, graphs, illustrations, and photos plus added multimedia dimensions of audio, video, animations, and an interactive study guide. Students may use the traditional text or the CD ROM independently or use the CD in conjunction with the text as a multi-media learning tool.

This module of the handbook discusses the management and security issues. not be as high as expected. Information Systems Evaluation Management discusses this issue among others, through its presentation of the most current research in the field of IS evaluation.

Software development and information systems design have a unique relationship, but are often discussed and studied independently. However, meticulous software development is vital for the success of an information system. Software Development Techniques for Constructive Information Systems Design focuses the aspects of information systems and software development as a merging process. This reference source pays special attention to the emerging research, trends, and experiences in this area which is bound to enhance the reader's understanding of the growing and ever-adapting field. Academics, researchers, students, and working professionals in this field will benefit from this publication's unique perspective.

Innovative ruptures of traditional boundaries in value chains are requiring companies to rethink how they go to market, what they need to own, what they need to retain and innovate as core competencies, and how they innovatively deal with suppliers and customers. The key message of the book is that the new knowledge-networked innovation economy requires a totally different strategic management mindset, approach and toolbox, and its major value-added is a new strategic management approach and toolbox for the innovation economy - a poised strategy approach. Designed for both managers and advanced business students, the book provides a unique combination of new management theory, selected managerial articles by prominent scholars such as Clayton Christensen, Henry Chesbrough, Sumantra Ghoshal, Quinn Mills, and Peter Senge, and a wide array of real-world case examples including GE, Shell, IBM, HP, BRL Hardy, P&G, Southwest Airlines and McGraw-Hill, within the dynamics of industries such as airlines, energy, telecommunications, wine & beverages, and computing. The authors illustrate powerful new strategic innovation concepts and tools, such as poised strategy for managing multiple business models, poised strategy scorecards (moving beyond the well-known balanced scorecard), the wheel of business model reinvention, and organizational rejuvenation methods. The book includes the concepts of: Poised Strategic Management, Organizational Rejuvenation, Business Models as Platform for Strategy, Poised Scorecards, Identifying Sources of Innovation in Business Ecosystems.

Many of the technological and managerial challenges of operating in the international environment are being addressed through global IT applications at the functional level of the organization.
