This book reviews recent work in psychology which sheds new light on important areas of concern to primary school teachers, providing clear guidelines for good practice. The *Psychology of Teaching and Learning in the Primary School* details the current controversies regarding the effective teaching of reading and numeracy, how to deal with emotional and behavioural difficulties, the best methods of assessing learning, as well as teaching children to think and develop their creativity. It is a useful text for tutors and students on initial teacher training courses, and to teachers involved in professional development. Each chapter contains an editor's summary, a list of further reading, a full list of references and activities to develop and deepen the readers' understanding in each area. At the same time, the book is written in an accessible style ideal for the non-psychologist and is well illustrated with practical classroom examples.

they were mere objects. In this book he proposes a radical shift, turning the focus away from evil and on to the central factor, empathy. Unlike the concept of evil, he argues, empathy has real explanatory power. Putting empathy under the microscope he explores four new ideas: firstly, that we all lie somewhere on an empathy spectrum, from high to low, from six degrees to zero degrees. Secondly that, deep within the brain lies the 'empathy circuit'. How this circuit functions determines where we lie on the empathy spectrum. Thirdly, that empathy is not only something we learn but that there are also genes associated with empathy. And fourthly, while a lack of empathy leads to mostly negative results, is it always negative? Full of original research, *Zero Degrees of Empathy* presents a new way of understanding what it is that leads individuals down negative paths, and challenges all of us to consider replacing the idea of evil with the idea of empathy-erosion.

approach to teaching thinking, begun at Harvard's Project Zero, that develops students' thinking dispositions, while at the same time deepening their understanding of the topics they study. Rather than a set of fixed lessons, Visible Thinking is a varied collection of practices, including thinking routines—small sets of questions or a short sequence of steps—as well as the documentation of student thinking. Using this process thinking becomes visible as the students' different viewpoints are expressed, documented, discussed and reflected upon. Helps direct student thinking and structure classroom discussion Can be applied with students at all grade levels and in all content areas Includes easy-to-implement classroom strategies The book also comes with a DVD of video clips featuring Visible Thinking in practice in different classrooms.

Based on an ethnographic study conducted in a Greek community, this book celebrates the small ways people teach and learn while they are engaged in other, supposedly more important, activities. By examining the intricate ways in which knowledge and skills of everyday life are transmitted, it shows how family, community, and culture shape the cognitive world of learners. Beginning with a rich description of the community and its culture, the book then focuses on six contrasting episodes of informal instruction. Video and audiotaped scenes of learning to dance, learning to perform the healing art of cupping, and learning about kinship, for example, provide material for detailed analyses. The book demonstrates the interplay of culture and learning by exploring how the cultural theme of struggle and the use of different interpretive frames shaped informal instruction in this community and how, at the same time, processes of informal teaching and learning contributed to the evolving construction of culture by its members. Interpretive framing emerges as a key concept that studies of situated cognition must consider.

setting adheres to regulatory requirements of data privacy protection such as GDPR. This book contains three main parts. First, it introduces different privacy-preserving methods for protecting a Federated Learning model against different types of attacks such as Data Leakage and/or Data Poisoning. Second, the book presents incentive mechanisms which aim to encourage individuals to participate in the Federated Learning ecosystems. Last but not the least, this book also describes how Federated Learning can be applied in industry and business to address data silo and privacy-preserving problems. The book is intended for readers from both academia and industries, who would like to learn federated learning from scratch, practice its implementation, and apply it in their own business. Readers are expected to have some basic understanding of linear algebra, calculus, and neural network. Additionally, domain knowledge in FinTech and marketing are preferred.

The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in

shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.
