Child well-being, which covers everything from family relationships to their material well-being, is now increasingly being talked about in policy and practice nationally and internationally. However, a lack of clarity remains about what the idea really means and how it can help children. This book brings together contributions from international experts in order to define child well-being and to further understand how it can improve children's lives. Issues covered include how the idea is being used in government policy and practice in the UK and USA, how children can contribute to the understanding of child well-being, recent advances in the exploration of indicators and measures of well-being, and the importance of context in making comparisons. A concluding chapter explores whether child well-being is a useful concept in understanding children's lives, whether it positively contributes to policy and practice, and the value of international comparisons. This edited collection is essential reading for all those involved in understanding children's lives and who have responsibility for improving them, including practitioners, policymakers, students and academics. Contains great projects to get the reader started on a great science fair experiment. Essential Statistics for Economics, Business and Management assumes no prior knowledge of statistics. It will also be highly relevant for the statistics component of courses in quantitative methods. The style of the book is similar to that of the highly successful Essential Mathematics for Economics and Business by Teresa Bradley and Paul Patton, with many worked examples integrated throughout. Emphasis is placed on verbalising concepts, problems and results of statistical analysis. This will help students learn how to start a problem, complete the calculations, and report the results in a way that makes sense to a non-statistician. Each concept is introduced with a brief but plausible explanation followed by Worked Examples. The Worked Examples will provide students with the necessary practice that they need in order to succeed at the subject. Emphasis is also placed on ?learning through doing? problems. Excel is used to encourage students in doing problems and to enhance understanding (with links to datasets online). Minitab printouts are also included in the text. Skills Development Exercises

with brief solutions are included within the chapters, and Progress Exercises on theory and applications are provided at the end of each chapter. Solutions to all the worked examples and progress exercises are available as an appendix. Web-based supplementary materials will be provided for lecturers adopting the text, including additional exercises and solutions, excel datasets and exercises, powerpoint slides with key formula, figures and tables. READ Perspectives, a refereed annual publication of the Institute for Research in English Acquisition and Development (READ), Washington, D.C., begins its sixth year with the theme

"Educating Language Minority Children: An Agenda for the Future." Volume 6 features presentations from a Boston University conference organized by READ and the Pioneer Institute. The essays represent truly diverse viewpoints on the education of limited-English students, rare in the complex and contentious arena of bilingual education. The lead article, "Rethinking Bilingual Education," by Charles L Glenn of Boston University, inspired the conference's organization. Dr. Glenn proposes new ways of schooling limited-English-speaking children that depart dramatically from the practices of the past 30 years. He proposes sound recommendations for revising Massachusetts bilingual education law, ideas that could well be applied in other states. Also included are Christine Rossell's "Mystery on the Bilingual Express," a critique of the controversial study by Thomas and Collier; Rosalie Pedalino Porter's follow-up review of El Paso, Texas's programs for English learners; Mark Lopez's "Labor Market Effects of Bilingual Education"; "Bethlehem, Pennsylvania's English Acquisition Program," by Thomas J. Dolusio; Maria Estela Brisk's discussion on the need to restructure schools to incorporate the large non-English student population; several articles regarding educational reform in Massachusetts, including two by school superintendents Eugene Creedon and Douglas Sears, and one by Harold Lane, Chairman of the Joint Education Committee in the Massachusetts Legislature; and, finally, Kevin Clark's "From Primary Language Instruction to English Immersion: How Five California Districts Made the Switch." Kevin Clark's California study "From Primary Language Instruction to English Immersion: How Five California Districts Made the Switch," describes how radical changes are being carried out in a few representative school districts since passage of California Proposition 227, the "English for the Children" initiative. "Educating Language Minority Children" is a valuable selection of the most current thinking on policies, programs, and practices affecting limited-English students in U.S. public schools. It provides a wealth of practical information useful to educators, parents, legislators, and policy analysts, and is an essential addition to libraries nationwide.

Born in Scotland over 250 years ago, William Playfair was a dreamer who ñsaw the world differently from other people.î Unfortunately, this skill didn't easily translate into the fame and fortune he hoped for. In fact, it often got him into trouble with family, friends and bosses. But Will's innovative vision did inspire a big idea that would set him apart: he turned numbers into pictures by creating line graphs, bar graphs and pie charts! Numbers as pictures? There's an idea that's off the charts!
