Knowing our World: An Artificial Intelligence Perspective considers the methodologies of science, computation, and artificial intelligence to explore how we humans come to understand and operate in our world. While humankind's history of articulating ideas and building machines that can replicate the activity of the human brain is impressive, Professor Luger focuses on understanding the skills that enable these goals. Based on insights afforded by the challenges of AI design and program building, *Knowing our World* proposes a foundation for the science of epistemology. Taking an interdisciplinary perspective, the book demonstrates that AI

technology offers many representational structures and reasoning strategies that support clarification of these epistemic foundations. This monograph is organized in three Parts; the first three chapters introduce the reader to the foundations of computing and the philosophical background that supports the AI tradition. These three chapters describe the origins of AI, programming as iterative refinement, and the representations and very high-level language tools that support AI application building. The book's second Part introduces three of the four paradigms that represent research and development in AI over the past seventy years: the symbol-based, connectionist, and complex adaptive systems. Luger presents several introductory programs in each area and demonstrates their use. The final three chapters present the primary theme of the book: bringing together the rationalist, empiricist, and pragmatist philosophical traditions in the context of a Bayesian world view. Luger describes Bayes' theorem with a simple proof to demonstrate epistemic insights. He describes research in model building and refinement and several philosophical issues that constrain the future growth of AI. The book concludes with his proposal of the epistemic stance of an active, pragmatic, model-revising realism.

A read-aloud introduction to geography for young children that, when opened and folded back, creates a freestanding globe Children are invited to identify

Did you know that the majority of the world's food is produced by small-scale farmers? Most of the food you eat comes from a farm, whether it's a crop, animal, dairy, fish or other type of farm. But farmers aren't the only food heroes out there. From the cultivation of food to its arrival at your table, different food heroes are involved every step of the way.

Discover the important role these heroes play and the digital innovations that are helping them and our food systems to perform better. Find out what each of us – governments, farmers, businesses and the general public – can do to improve how our food is produced and learn how you can make a difference!
