The Corsair was one of WWII's most superb fighters, achieving a victory ratio of nearly 11:1 in the Pacific. Had things worked out differently, its sister craft, Goodyear's F2G Super Corsair, might have eclipsed that record. Based on Goodyear's fixed-wing F1G design, the F2G had a bubble cockpit and was fitted with a Pratt & Whitney R-4360 engine. The twenty-eight cylinder, four row radial air-cooled monster provided nearly 50% more take-off power than the standard double Wasp. Yet by the close of WWII, only five F2G's had been built, and so the plane never saw combat. Originally printed by Goodyear and the U.S. Navy, this Flight Handbook taught pilots everything they needed to know before entering the cockpit.

The A-7 Corsair II served the U.S. Navy for over over two decades, and flew with distinction during the Vietnam conflict. The subsonic A-7 was based on Chance Vought's supersonic F-8 Crusader. It boasted a heads-up display, an inertial navigation system, and other innovations. The plane entered service in 1966, and served in Vietnam in late 1967. Its performance was impressive. The USS Ranger's VA-147 flew over 1,400 sorties with the loss of only one aircraft. The Air Force purchased an advanced version, the A-7D, equipped with a more powerful engine. The plane later flew missions over Lebanon, Libya, Grenada, Panama, and Iraq. The last planes in U.S inventory were retired in 1991. Originally printed by the U.S. Navy and Vought, this handbook for the A-7 provides a fascinating glimpse inside the cockpit of this famous aircraft. Originally classified restricted, the manual was recently declassified and is here reprinted in book form.
