anthropologists, this book provides an in-depth look at the current processes of immigration, political behavior, and citizenship in both the United States and Europe. Essays draw on issues of race, national identity, religion, and more, while addressing questions, including: How should citizenship be defined? In what ways do immigrants use the political process to achieve group aims? And, how do adults and youth learn to become active participants in the public sphere? Among numerous case studies, examples include instances of racialized citizenship in “Algerian France,” Ireland’s new citizenship laws in response to asylum-seeking mothers, the role of Evangelical Christianity in creating a space for the construction of an identity that transcends state borders, and the Internet as one of the new public spheres for the expression of citizenship, be it local, national, or global.

This original and engaging book investigates American television viewing habits as a distinct cultural form. Based on an empirical study of the day-to-day use of television by working people, it develops a unique theoretical approach integrating cultural sociology, post modernism and the literature of media effects to explore the way in which people give meaning to their viewing practices. While recognising the power of television, it also emphasises the importance of the social and political factors which affect the lives of individual viewers, showing how the interaction between the two can result in a disengagement with corporately produced culture at the same time as an appropriation of the images themselves into people s lives.

The surprising effects of American TV on global viewers As a dominant cultural export, American television is often the first exposure to American ideals and the English language for many people throughout the world. Yet, American television is flawed, and, it represents race,

class, and gender in ways that many find unfair and unrealistic. What happens, then, when people who grew up on American television decide to come to the United States? What do they expect to find, and what do they actually find? In *America, As Seen on TV*, Clara E. Rodríguez surveys international college students and foreign nationals working or living in the US to examine the impact of American television on their views of the US and on their expectations of life in the United States. She finds that many were surprised to learn that America is racially and economically diverse, and that it is not the easy-breezy, happy endings culture portrayed in the media, but a work culture. The author also surveys US-millennials about their consumption of US TV and finds that both groups share the sense that American TV does not accurately reflect racial/ethnic relations in the US as they have experienced them. However, the groups differ on how much they think US TV has influenced their views on sex, smoking and drinking. *America, As Seen on TV* explores the surprising effects of TV on global viewers and the realities they and US millennials actually experience in the US.

Both the practitioner and academic communities have voiced strong opinions regarding the progress of women in reaching the executive suite and the corporate boardroom. Proponents on each side of the current debate offer evidence suggesting the accuracy of their respective positions. One view holds: "The fight is over. The battle is won. Women are now accepted as outside directors in the preponderance of corporate boardrooms" (Lear, 1994: 10). An alternative perspective, however, suggests there is much progress left. An illustration of the type of remaining barriers is provided by T. J. Rodgers, chief

executive officer (CEO) of Cypress Semiconductor Corp. , who has commented that "a 'woman's view' on how to run our semiconductor company does not help us" (Rodgers, 1996: 14). Regardless of where one falls along the spectrum anchored at one end by the view that women have made substantial progress in reaching the upper echelons of corporations and anchored at the other end by the view that women have barely begun to penetrate the "inner sanctum" of corporations, the central issue is the extent to which women have succeeded in cracking the proverbial "glass ceiling. " The glass ceiling is a metaphorical barrier which prevents women from attaining the upper-most organizational positions (e. g. , Karr, 1991; Morrison, White, Van Velsor, and the Center for Creative Leadership, 1992; Powell & Butterfield, 1994; U. Teaching at Public School 1430 in New York City is where Cheryl Hulteen discovered and refined the heart of her teaching, "Prior to PS 1430 I taught the same way I had been taught. The teacher speaks to the students and they listen somewhat attentively. The teacher tells students to do something and for the most part they do it. In many classrooms I worked in before PS 1430, the teachers led the class in a "Good morning Ms. H" sing-song chant as greeting to me, the new teacher, the Resident Artist. None of those things happened at PS

1430. I had to... improvise." Hulteen shares how she improvised new, humorous and powerful ways of understanding what it meant to learn, teach and embrace change in an educational culture that often settled for much less. YES YES GOOD explores the poignantly compelling and emotional portraits of students and teachers who learn to: Say YES to their creativity and ideas. Say YES to the creativity and ideas of the people they work with.

high blood pressure, type 2 diabetes, and other diseases. **BENEFITS** This award-winning evidence-based program has been implemented in all 50 states and in more than 20 countries. The program began as a joint research project between the Harvard School of Public Health (currently the Harvard T.H. Chan School of Public Health) and Baltimore Public Schools. In extensive field tests among students and teachers using the program, children ate more fruits and vegetables, reduced their intake of saturated and total fat, watched less TV, and improved their knowledge of nutrition and physical activity. The program is also well liked by teachers and students. This new edition provides fourth- and fifth-grade teachers with the following:

- Nutrition and activity guidelines updated according to the latest and best information available
- 48 multidisciplinary lessons that supply students with the knowledge and skills they need when choosing healthy eating and activity behaviors
- Lessons that address a range of learning outcomes and can be integrated across multiple subject areas, such as math, language arts, social studies, and visual arts
- Two new core messages on water consumption and sleep and screen time along with two new related lessons
- A new Kid's Healthy Eating Plate, created by nutrition experts at the Harvard T.H. Chan School of Public Health, that offers children simple guidance in making healthy choices and enhances the USDA's MyPlate Eat Well & Keep Moving also offers a web resource that contains numerous reproducibles, many of which were included in the book or the CD-ROM in previous editions. A separate website,

www.eatwellandkeepmoving.org, provides detailed information for food service managers interested in making healthful changes to their school menus; this information includes recipes, preparation tips, promotional materials, classroom tie-ins, and staff training. The web resource also details various approaches to getting parents and family members involved in Eat Well & Keep Moving. A Holistic Approach Eat Well & Keep Moving is popular because it teaches nutrition and physical activity while kids are moving. The program addresses both components of health simultaneously, reinforcing the link between the two. And it encompasses all aspects of a child's learning environment: classroom, gymnasium, cafeteria, hallways, out-of-school programs, home, and community centers. Further, the material is easily incorporated in various classroom subjects or in health education curricula. Eight Core Principles Central to its message are the eight core Principles of Healthy Living. Those principles—at least one of which is emphasized in each lesson—have been updated to reflect key targets as defined by the CDC-funded Childhood Obesity Research Demonstration partnership. These are the principles:

- Make the switch from sugary drinks to water.
- Choose colorful fruits and vegetables instead of junk food.
- Choose whole-grain foods and limit foods with added sugar.
- Choose foods with healthy fat, limit foods high in saturated fat, and avoid foods with trans fat.
- Eat a nutritious breakfast every morning.
- Be physically active every day for at least an hour per day.
- Limit TV and other recreational screen time to two hours or less per day.
- Get enough

One of the difficulties that all psychiatrists encounter when they see patients for less than fifty minutes is how to be empathic while on the run. Nowadays the psychiatrist, often behind schedule, has but a Twenty Minute Hour to evaluate a patient's level of functioning and current symptoms and side effects; to judge their responsiveness to medication; to do some teaching about medication and/or disease management; and finally to complete the chart. Prime Time gives pointers from an experienced clinician on how to deal more effectively and efficiently within time constraints. It is designed to assist psychiatrists with medication and evaluation, and to allow for psychotherapy in addition to the requisite psychopharmacology. The primer provides a number of short cuts and clinical maneuvers in initiating and ending sessions that can help promote positive transference, assist effective flow of information, and aid in closing out the session without falling behind schedule.

The book introduces readers to the two ways the brain is programmed to learn. It explains how these two systems affect classroom instruction and explains how the events of the culture affect brain development. It also explains how to set up a brain-compatible classroom and the underlying principles that guide all student learning. The book is loaded with student projects of all kinds that are emotionally engaging to students and help them learn more successfully. The book also explains how the emotional part of the brain (the limbic system) many times interferes with learning and prevents reasoning, thinking, and problem-solving to occur preventing students from using the rational parts of the brain (the frontal lobe system) to occur. The book explores how dysfunctional behavior in school such as ADD, & ADHD are related to school skill development and achievement. The argument is made that pre-requisite school success skills that lead to proficiency in reading, writing, calculating, and problem-solving are not really taught but merely assumed to be learned from the home and the early grades. Not only that but these pre-requisite skills are ALL found in the frontal lobe executive functions. The students who have those skills are almost always the high achievers in school. Those students that don't have these school success skills simply don't achieve at the level of the other students who have those skills.
