In Psychology: The Science of Person, Mind, and Brain, experienced teacher, researcher, and author Daniel Cervone provides students with a new and exciting way of understanding psychology. Cervone organizes material around three levels of analysis -- person, mind, and brain -- and employs a person-first format that consistently introduces topics at the person level: theory and research on the lives of people in sociocultural contexts. Students are able to make sense of the latest research through what they understand best: people. With fellow teacher and researcher Tracy Caldwell, Cervone has conceived a text beyond the print experience from the ground up, integrating online immersive research experiences and assessment tools that capitalize on research findings on pedagogy and student learning (e.g., the testing effect). Pedagogical Author, Tracy L. Caldwell Working closely with Daniel Cervone, fellow teacher and researcher Tracy Caldwell of Dominican University developed the book's pedagogical program from the Preview Questions at the beginning of each section to the Self-Tests at the end of each chapter. The pedagogy is designed to engage students at multiple levels of Bloom's taxonomy and at multiple points in each chapter.

EBOOK: Psychology: The Science of Mind and Behaviour, 4e

This title imparts students with a scientific understanding of the field of psychology whilst also showing them the impact on their day-to-day existence. A conceptual framework within the text emphasises relations between biological, psychological, and environmental levels of analysis and portrays the focus of modern psychology.

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it.

In this innovative approach to the Intro Psychology course, authors John Cacioppo and Laura Freberg present psychology as an integrative science that is highly relevant for students of all majors. The authors have kept a familiar chapter structure, providing an easy roadmap for the introductory psychology course, but the similarities with other approaches to introductory psychology end there. Integration extends in two directions, highlighting connections within psychology as well as between psychology and other disciplines. The writing and features are smart and engaging, and consistently illustrate the benefit of using multiple perspectives within psychology. Cacioppo and Freberg offer the best science possible, including exciting new research findings likely to expand students' understanding of psychology as a scientific field of study. Features and images coordinate with and enhance the text, providing many additional opportunities for critical thinking and connecting ideas. Psychology is evolving into an integrative, multidisciplinary field, and this text offers an opportunity to teach all of psychology in one place and at one time. Examines human psychology and behavior through the lens of modern evolutionary psychology. *Evolutionary Psychology: The New Science of the Mind*, 5/e provides students with the conceptual tools of evolutionary psychology, and applies them to empirical research on the human mind. Content topics are logically arrayed, starting with challenges of survival, mating, parenting, and kinship; and then progressing to challenges of group living, including cooperation, aggression, sexual conflict, and status, prestige, and social hierarchies. Students gain a deep understanding of applying evolutionary psychology to their own lives and all the people they interact with.

The science of behavior and mind is referred to as psychology. It is concerned with the study of conscious and unconscious phenomena as well as feeling and thought. Psychology aims to

understand the emergent properties of brains as well as the diverse phenomena that are related to those properties. It deals with the patterns of behavior, thought and emotion in individuals. Some of the mental processes studied within this field are cognition, perception, emotion, attention, intelligence, subjective experiences, etc. Psychology also studies the unconscious mind and the psychological traits that are influenced by genetics and environment. It is classified into various sub-fields such as abnormal psychology, evolutionary psychology, forensic psychology and comparative psychology. This book is a compilation of chapters that discuss the most vital concepts in the field of psychology. Some of the diverse topics covered herein address the varied branches that fall under this category. This book will provide comprehensive knowledge to the readers.

The third edition of Psychology: The science of mind and behaviour provides an authoritative and highly-regarded introduction to this fascinating topic. Although many approaches to the study of Psychology are presented in this text, the emphasis is on the biopsychosocial model. This serves as an underlying commonality to the examination of each topic, giving direction to students at the beginning of their studies in this well-researched field. Written by a team of Australian and New Zealand-based academics, each a subject matter expert, this edition contains updated case studies and a brand new feature, In the News, presenting interesting topics in Psychology. Additional local and global cases explore cross-cultural and Indigenous psychology, and probing questions encourage students to think critically about cases and to examine the research methods used in real-life examples. Aided by its strong pedagogical framework, Psychology makes use of cutting-edge learning technology and interactive resources to provide a comprehensive learning solution.
