Fourth Edition is an essential companion for students and researchers of health and health services, health clinicians and policy-makers with responsibility for applying research findings and judging the soundness of research. "Health service researchers - new and old - will be delighted by this new edition of a popular and useful text. There is new content but also updated material making this practically useful as a resource at any stage of the research trajectory. While health is the focus the book is hugely valuable to researchers in cognate areas. such as social care, education and housing. The book meets its own high standards in being easy to follow, well indexed and containing interesting examples of approaches. The limitations of different methods are also honestly reported. A 'must have' for the book shelf." Jill Manthorpe, Professor of Social Work, King's College London, UK

"When first published in 1997, this volume was the first systematic overview of research methods used in the health field. In its updated 4th Edition it remains vital and, if anything, more important given the growing number of researchers and students investigating health issues and health services. It provides an impressively comprehensive overview of health research methods in which the wealth and variety of experience of the author shines through at every point. Qualitative, quantitative and mixed methods are appraised and explained with

unpartisan authority and rigour, and the volume covers everything from multidisciplinary collaboration in health service evaluation through the Delphi technique of consensus development to the health economics needed to evaluate costing." Paul Stenner, Professor of Social Psychology, The Open University, UK "This excellent text really is a must for anyone involved in health research. It is truly multidisciplinary in its scope, drawing on a breadth of relevant research from health economics, to epidemiology to psychology which is beyond the scope of most books on research methods. Yet in spite of the wealth of material included it is written and presented in an accessible way so that it will be an invaluable source for those with a background in either qualitative or quantitative research and from students to experienced researchers." Robert J. Edelman, Professor of Forensic and Clinical psychology, Roehampton University, UK Reviews of previous editions: "Provides an excellent broad based introduction to the subject. The content is clearly presented and at a suitable level for health professionals and postgraduate students in health and health-related social sciences." Virginia Berridge, London School of Hygiene and Tropical Medicine, UK "A valuable source book for health services researchers, health care providers, and others interested in quantifying quality of life for clinical or research purposes." The International

The eight articles collected in this volume show a new way of assessing the world health situation can be used to generate health data unprecedented in their completeness, comparability, and objectivity. The approach was first used to develop the empirical basis for the world development report 1993:

Investing in health. The book, which has two parts, discuss the methods, findings, and implications of the first comprehensive assessment of the global burden of disease, of the financial resources available to the health sector in every country, and of the options for cost-effective interventions. Articles in part one describe the concept, applications, and results of the use of disability-adjusted life years (DALYs) for measuring the global burden of disease. Articles in part two provide comparative assessments of financial resources available to the health sector and the range of interventions that can be purchased with these resources.

A weekly review of politics, literature, theology, and art.
