An authoritative reference handbook grounded in the results of empirical research and strategic management theory.

Increasingly, the challenge of management is to create and supply knowledge in order to sustain organizational performance. However, few books on management strategy have been written using this concept as a foundation. This unique volume adopts a knowledge-based approach that will complement and perhaps supplant other perspectives. Editors Nick Bontis and Chun Wei Choo look at the literature through the lens of strategic management and from the vantage point of organizational science. The thirty readings have been carefully selected and commissioned to provide the best literature available--from articles newly written for this book and from existing publications.

Innovative ruptures of traditional boundaries in value chains are requiring companies to rethink how they go to market, what they need to own, what they need to retain and innovate as core competencies, and how they innovatively deal with suppliers and customers. The key message of the book is that the new knowledge-networked innovation economy requires a totally different strategic management mindset, approach and toolbox, and its major value-added is a new strategic management approach and toolbox for the innovation economy - a poised strategy approach. Purpose: Strategic management has been developing in business theory and practice for over 50 years. Presently, it constitutes the main area of research interest in management science. The contemporary conditions of business operations create new challenges for strategic management, such as the use of dynamic capabilities in strategy building, relational strategies, networking of organizations, technology development and automation of processes, and global strategies. These challenges are often referred to as neostrategic management. The purpose of this publication is to present the findings of research concerning new strategic management concepts and challenges. **Methodology:**

The main research method of this article was a narrative literature review. On the basis of the research, the development of the concepts as well as contemporary trends and challenges of strategic management were characterized. There is also a synthesis of the problems and research results presented in the articles in this special issue of JEMI.

Findings: Various schools and approaches to strategy formulation have been created. They indicate different factors that allow for success in strategic management such as: setting long-term goals, selection of programs and their execution plans (planning school); connection of the enterprise with the environment (evolutionary school); focusing attention on competitive advantage and achieved performance (position-based school); focus on one's own resources and competences (resource school); use of opportunities and creating innovation (simple rules school); selection of the best option and orientation in business management (real options school); or eclectic perspectives, integrating the listed approaches. The strategic management concept has two dimensions. The first dimension is related to the emergence of subsequent, new strategic management concepts, which often hark back to the previous schools and approaches. The second dimension of development applies to operationalization and adjustment of the previous concepts to the changing conditions. **Implications for theory and practice:** The paper characterizes the research results presented in the articles included in this JEMI issue. They deal with various problems and challenges in the field of strategic management, such as the relationship between market dynamics, market orientation and performance of enterprises; the innovativeness of companies as a contemporary strategic orientation of companies; the strategy implementation and the management of the organization change; problems of strategic management of the development of the city. **Originality and value:** The problems presented in the study relate to challenges and new concepts in strategic management. They enrich the existing knowledge on the development of strategic management, and also create inspiration for further research in this area. **Keywords:** evolution of the strategic management concept, neostrategic management, strategy implementation success, market dynamism, strategic management of cities, innovation strategy. **Table of Contents**

Re-issue of a foundational work in the field of business ethics from R. Edward Freeman.

For full description, see Hill/Jones, Strategic Management, 6/e.

This volume of the series Research in Human Resource Management (HRM) focuses on a number of important issues in HRM and OB including performance appraisal, political skill, gratitude, psychological contracts, the philosophical underpinnings of HRM, pay and compensation messages, and electronic human resource management. For example, the first article by Cleveland and Murphy considers a very controversial issue (i.e., the reasons that organizations are abandoning the use of performance appraisal). The next article by Harris, Ferris, Summers, and Munyon is extremely interesting, and focuses on how composite political skills (e.g., social astuteness, interpersonal influence) helps individuals develop productive work relationships in organizations. The third article by Scandura and Sharif presents a very innovative model of gratitude in organizations, and the authors argue that gratitude is essential for maintaining positive social relations in organizations. The fourth article by Suazo and Stone-Romero provides an extremely comprehensive review of the theory and research on psychological contracts in organizations from 1960-2015. The subsequent article by Bae, Kang and Kim presents a very unique perspective on HRM, and considers the philosophical underpinnings of the field. The sixth article by Murray, Dulebohn, Roehling, and Werling presents a very innovative model to explain the role that organizational messages about changes in pay or compensation systems have on anticipatory pay satisfaction. The final article in the series by Johnson, Thatcher, and Burleson presents a thought-provoking framework for understanding the key role that information technology (IT) plays in the field of HRM. The series should be useful to researchers and doctoral students in the fields of HRM, OB, and Industrial and Organizational Psychology. It should also be relevant for doctoral courses and scientist-practitioners in these fields.

"Business architecture" is a concept for optimizing corporate boundaries aimed at realizing targeted business models and corporate system design involving stakeholders. To optimize the corporate boundaries, companies must partially and/or wholly optimize the individual management elements (strategy, organization, technology, operation, and leadership) comprising the corporate system that has achieved congruence with its environment. The type of management concerned with optimizing these corporate boundaries and the corporate systems that consist of individual management elements is referred to in this book as "boundary management." The concept of "boundaries congruence" inside and outside the corporate system, and the formation of an optimal architecture concerned with environmental change and with management elements such as strategy, organization, technology, operation, and leadership are key to implementing dynamic strategic management. This book presents the concept of "business architecture" and optimizing processes as a corporate system based on multiple corporate case studies (Sony, NTT-DATA, NTT-DoCoMo, Toyota, Honda, Omron, Takara, Recruit, First Retailing, Panasonic, and Canon).
