This laboratory manual is designed for college algebra or precalculus courses that use DERIVE graphing software. Each lab exercise is designed to lead students to mathematical insights by encouraging structured exploration. Designed in an easy-to-use workbook format, all explorations are self-contained on pages with space for answers and are perforated so they can be torn out and handed in to the instructor. The manual also supports NCTM guidelines.

Computer algebra systems allow students to work on mathematical models more efficiently than in the case of pencil and paper. The use of such systems also leads to fewer errors and enables students to work on complex and computationally intensive models. Aimed at undergraduates in their second or third year, this book is filled with examples from a wide variety of disciplines, including biology, economics, medicine, engineering, game theory, physics, and chemistry. The text includes a large number of Maple(R) recipes.
